

ABSTRACT OF THE DISCLOSURE

A pen integrated with a card reader is mainly composed of a pen tube and a detachable tube. Inside the detachable tube, there is a connector; through a locking ring, the connector is firmly positioned and attached to inside of the detachable tube; said the pen tube can be separated from the detachable tube for independent use; said the connector has a terminal plug exposable at one end of the detachable tube and a slot inside the detachable tube; there is a slit on the outer surface of the detachable tube to match the slot inside, so an IC card can be inserted through the slit into the slot; at the same time, the exposed terminal plug can connect to a general computer or other main console; thus, the IC card can communicate with a general computer or other main console, and further retrieve or store data.
